Versailles (France)

## PROFILE

Junior Web Developer with practical experience in React, Django, JavaScript and Node.js. Built and deployed real-world projects, including a client-facing business app. Strong problem-solving background from finance, now focused on delivering robust, user-friendly web solutions.

## PROFESSIONAL EXPERIENCE

### Web Developer – Cap’Confort (Remote, June–July 2024)

- Built and deployed a production-ready business web application using Django, Python, JavaScript, and Bootstrap.
- Designed a responsive front-end ensuring optimal user experience across devices.
- Managed PostgreSQL database integration and configured deployment on Heroku.
- Worked directly with the client to define requirements and deliver a functional, user-friendly solution.

### Transversal Control Officer – BNP Paribas (Paris, Oct 2019–Oct 2021)

- Managed local regulatory reporting with strict attention to detail and deadlines.
- Reviewed and improved financial procedures to enhance accuracy and compliance.
- Analyzed data quality issues and proposed solutions to improve reporting reliability.
- Collaborated with cross-functional teams to align on compliance standards.

## PERSONAL PROJECTS

### Interactive Photo Tagging Game – [Live Demo](#) | [GitHub Repo](#)

- Built a full-stack web game using React, Node.js, Express, PostgreSQL, and Prisma.
- Implemented percentage-based click detection and real-time game logic to ensure accurate character validation across screen sizes.
- Integrated an AI-powered hint system using the OpenAI API to generate contextual hints without revealing exact character locations.
- Designed a responsive React interface with clear frontend/backend separation and leaderboard persistence.

### Blog Application – [GitHub Repo](#) | [Admin Demo](#) | [Public Demo](#) | [API Demo](#)

- Developed a full-stack blogging platform with a Node.js/Express backend API, a React admin dashboard, and a public-facing frontend for reading and commenting on posts.
- Implemented JWT authentication, secure CRUD operations for posts and comments, and role-based access for admins and public users.
- Built a modular backend with Express, Passport.js, and PostgreSQL, supporting protected routes, comment moderation, and post publishing/unpublishing.
- Designed responsive React frontends with authentication-aware routing, reusable components, and a polished UI with CSS Modules.
- Deployed backend and frontends separately (Railway for backend, Netlify for frontends).

### Resume Builder Web App – [Live Demo](#) | [GitHub Repo](#)

- Developed a Resume Builder Web App using React and Vite, enabling users to create and download professional resumes in PDF format with real-time preview updates.
- Integrated PDF generation functionality using html2canvas and jsPDF to preserve the resume's layout and added support for LinkedIn profile links.
- Designed a responsive UI with CSS and utilized modular React components for better maintainability and scalability.
